## INTRODUCTION

The University of Michigan (U-M) ADVANCE Program works to improve campus environment through a focus on faculty in four primary domains of impact: recruitment, retention, leadership, and climate. We assess whether the University provides an environment that supports innovative scholarship, teaching, research, and creative endeavors through a periodic campus-wide faculty climate survey ${ }^{1}$ as well as individualized assessments of the climate in academic units and departments. We also conduct faculty exit interviews and other data collection efforts focused on a variety of questions related to the faculty experience. Additionally, ADVANCE collects and assesses a combination of institutional and unit-level data each academic year ( $A Y)^{2}$ regarding the state of the faculty at $U-M$ that is shared as the Annual Indicator report. This report serves as a resource to track the University's progress on strategic plans in the areas of faculty recruitment, retention, and leadership.

U-M ADVANCE was initially funded by the National Science Foundation (NSF) ${ }^{3}$ in 2002 to focus on faculty in the fields of Science, Technology, Engineering and Mathematics (STEM). The terms of the NSF grant required each institution funded to report annually on specific indicators ${ }^{4}$ for STEM faculty at their institution. ${ }^{5}$ When the NSF funding ended at the close of AY2007, ADVANCE continued the practice of collecting and reporting on these indicators annually. Over time, the body of annual indicators was refined; those that were deemed less informative were discontinued, while others were added. In addition, as the mission of the ADVANCE Program broadened to all faculty in 2007, our data collection efforts broadened. Not only did we begin collecting indicator data on all U-M faculty on the Ann Arbor campus and within Michigan Medicine, we worked to retroactively gather the same data for all nonSTEM faculty.

ADVANCE now has tenure-track faculty appointment count data for all U-M colleges and schools from AY1979 to present, allowing tracking of all indicators derived from appointment counts (e.g., sex ratios, race-ethnicity ratios, and cohort outcomes). We have similar data for research- and clinical-track faculty, campus-wide, from AY2009 to present ${ }^{6}$. However, additional faculty characteristics that are included in our reports as indicators but not included in the U-M human resource system (e.g., named professorships, service on tenure/promotion committees and executive committees), are not available

[^0]for non-STEM academic units prior to AY2009, when ADVANCE expanded the annual indicator data collection to include these colleges and schools. Nonetheless, as a result of these efforts, the ADVANCE Program has amassed a large amount of descriptive data on U-M faculty across many years. ${ }^{7}$

The current report includes institutional data that spans more than forty years to provide a sense for the changing profile of the faculty composition, with a focus on faculty leadership and recognition. We utilize this wealth of information to consider these data in ways that aim to help policymakers at the University identify areas of progress and areas requiring continued efforts - especially related to ADVANCE's shared mission with the University to strengthen faculty recruitment, improve retention, and develop leadership that reflects the composition of its campus constituents.

We must point out that impacts of the COVID-19 pandemic on faculty composition are consequential to the AY2021 data point. In April 2020, the U-M announced a hiring freeze to preserve financial resources in the face of reduced revenue and unpredicted expenses related to the pandemic. The freeze remained in place until July 1,2021 , when a new budget allowed units to begin filling critical faculty vacancies. In the meantime, crucial hiring activities due to faculty searches paused during shutdown, faculty departure, and expedited retirement had an effect on the composition of the faculty who we are in the midst of discovering.

[^1]
## TENURE-TRACK FACULTY COMPOSITION

This section provides an overview of the composition of tenure-track faculty and presents changes in the population of these faculty from AY1979 through AY2021 in three-year intervals. Assessment of whether faculty diversity has improved requires examining not only racial composition, but faculty representation at the intersection of gender and race. We do so according to a combination of gender and race-ethnicity that make up six demographic sub-groups. ${ }^{8}$

Figure 1a presents the percentage changes in composition of tenure-track faculty overall. The most noticeable trend is the decline across time in the percentage of White men faculty and the corollary increase in the percentage of White women faculty. The percentage of White men faculty as a proportion of the overall faculty composition decreased by about a third, from $79 \%$ to $46 \%$, while the percentage of White women faculty almost doubled, from $13 \%$ to $25 \%$. Another growth trend is the change in the proportion of Asian/Asian American men faculty, with a gain of 10 percentage points, from $3 \%$ to $13 \%$. Asian/Asian American women faculty do not compose the U-M faculty in a discernible percentage until AY1985, when they make up just 1\% of the faculty, and steadily grow to 6\% by AY2021. In contrast, stagnation characterizes the percentages of Underrepresented Minority ${ }^{9}$ (URM) faculty for the last twenty years. The percentage of URM men faculty hovers between $4 \%$ and $6 \%$ at any given time from AY1991 to AY2021, following a period of slight increase over the late 1990s/early 2000s. Moreover, the percentage of URM women faculty has remained static at $4 \%$ for the last two decades.

Figure 1a: Tenure-track Faculty Composition by Gender and Race-Ethnicity (All Ranks)

[^2]Notable differences emerge when the tenure-track faculty composition data are disaggregated by position rank. As depicted in Figure 1b, the composition of assistant professors is more diverse compared to the overall tenure-track faculty population at U-M, as this rank reflects a pronounced change in the proportions of women and Black, Indigenous and People of Color (BIPOC) ${ }^{10}$ faculty among those newly hired on the tenure track faculty over time. Overall, the proportion of White women remained fairly stable at just over a quarter of assistant professors over the last two decades, with a slight decrease in the early 2000s. In contrast, both Asian/Asian American men and women faculty had the largest percentage increase of any sub-group among those in the rank of assistant professor, with growth starting in the mid-1990s, from $6 \%$ to $13 \%$ and $1 \%$ to $10 \%$, respectively. Meanwhile, after a preceding period of slight increase in the early 2000s, the percentage of URM men assistant professors decreased and then remained flat at $6 \%$ since then. The percentage of URM women faculty followed a similar pattern of increase, dipping and stagnation until the current AY2021 data, which shows a slight uptick to $7 \%$ of assistant professors.

Figure 1b: Tenure-track Faculty Composition by Gender and Race-Ethnicity (Assistant Professors)

The higher the rank, the less diverse are faculty in terms of gender and race-ethnicity at both the associate professor and full professor ranks. On the whole, women remain underrepresented compared to men among tenured faculty at the associate level, comprising $42 \%$ versus $58 \%$ in AY2021, respectively (Figure 1c). For White women faculty, however, the gap in representation in relation to White men associate professors is moving toward parity, with a difference of just $7 \%$ ( $31 \%$ versus $38 \%$, respectively). The gap by race-ethnicity is much wider, with $31 \%$ BIPOC tenured faculty at the associate level compared to $69 \%$ White faculty. Disaggregation of BIPOC faculty by gender and race-ethnicity reveals notable nuances. We see that the percentage of URM men faculty at the associate level has dwindled in recent years after reaching a high of $8 \%$ in AY2018, and then dropping to $6 \%$ by AY2021. Similarly, URM women faculty at the associate professor level show a declining trend, from a high of $7 \%$ in AY2006, to a flattening at 4 or $5 \%$ for the last fifteen years. On the other hand, over that same period of time (AY2006 to AY2021), there has been a steady increase in the percentage of faculty at the

[^3]associate level among Asian/Asian American men and Asian/Asian American women, from 9\% to 14\% and $3 \%$ to $7 \%$, respectively.

Figure 1c: Tenure-track Faculty Composition by Gender and Race-Ethnicity (Associate Professors)

As Figure 1d shows, the growth in diversity among full professors has been consistent, but rather slow until the pace picked up in AY2006. Yet women remain underrepresented compared to men among full professors, comprising $28 \%$ versus $72 \%$ in AY2021, respectively. Moreover, the percentage of White women full professors stands out in being unchanged at $21 \%$ for the last two reporting periods. Lack of growth in composition is also reflected in the underrepresentation of BIPOC tenured faculty at the full professor level compared to White faculty, comprising $24 \%$ versus $76 \%$ in AY2021, respectively. Again, disaggregation of BIPOC full professors highlights uneven growth in the composition of these faculty by gender and race-ethnicity. Asian/Asian American men full professors are the only group who show consistent growth in percentage of faculty composition for the last two reporting periods, amounting to $12 \%$ in AY2021. Otherwise, there is a flatline at $5 \%$ for the percentage of URM men full professors going back fifteen years. It is striking that both URM women and Asian/Asian American women remained static at $1 \%$ of faculty at the full professor rank until AY2009 and AY2012, respectively. The percentage of URM women full professors reached $2 \%$, then hovered at $3 \%$ for the better part of a decade until an uptick to 4\% for AY2021. The percentage of Asian/Asian American women full professors also reached $2 \%$ and has held static at 3\% for the last two reporting periods.

Figure 1d: Tenure-track Faculty Composition by Gender and Race-Ethnicity (Full Professors)

A qualifying fact to consider regarding the results for tenure-track faculty composition is that the total number of faculty has increased, so the numerical size of a faculty group may not be conveyed in the percentages presented above. In fact, the campus population of tenure-track faculty at U-M grew by $46 \%$ from AY1979 to AY2021 ( $\mathrm{N}=2,100$ and $\mathrm{N}=3,065$, respectively). ${ }^{11}$ The total headcount ${ }^{12}$ of tenuretrack White men faculty decreased by about $14 \%$ during this time period, from 1,671 to 1,444 , while the growth in the total number of tenure-track White women faculty more than doubled, from 271 to 765. Tenure-track Asian/Asian American men faculty had a fivefold growth in numbers, from 63 to 387, while tenure-track Asian/Asian American women faculty increased dramatically, from 7 to 173 . Tenure-track URM faculty also showed pronounced growth from relatively sparse numbers. The total number of tenure-track URM men more than doubled over the period, from 64 to 173, while tenure-track URM women faculty outpaced that growth with a more than fourfold increase in total numbers, from 31 to 134. Thus, it is the case that the size of a particular faculty group may be increasing even if the percentage is not. At the same time, the percentage change in composition over time for a particular faculty group may misconstrue the processes at hand - which is the case for White men faculty, for whom the decrease in percent composition over the last forty years (32\%) does not equate to a similar loss of population (just 14\%).

Overall, the faculty composition data suggest there has been a modest increase in the diversity of the faculty over the last two decades, but the change is uneven among groups, varies by rank, and has waxed and waned at different times. Many factors contribute to the general pattern of increase in faculty diversity, including the relatively higher rate at which White men are retiring from the University. In addition, it appears that ADVANCE Program-related activities and initiatives directed at increasing the representation and success of women and underrepresented minority faculty have positively influenced

[^4]the increase in diversity since 2002. In particular, we note increasing representation of women faculty which coincides with the inaugural ADVANCE NSF grant and the implementation of the STRIDE workshop, which focused on recruiting. ${ }^{13}$ Yet, the diversification of the tenure-track faculty has occurred unevenly by rank, with far more progress being made at the pre-tenure faculty level. ADVANCE data indicate that BIPOC faculty, and especially URM faculty, are choosing to leave the university at a greater rate than White faculty in recent years and that there are a number of challenges to be addressed institutionally. ${ }^{14}$ As a result, women and URM faculty remain underrepresented at the tenured faculty levels, which has important implications for their representation in the leadership pipeline and prestigious institutional awards. With the faculty composition context in mind, the remainder of this report will address the focal themes of this report: faculty leadership and recognition.

[^5]
## FACULTY LEADERSHIP

In this section we consider opportunities for leadership and the extent to which these opportunities differ by gender and race-ethnicity. It is important to examine leadership opportunities for faculty since previous research conducted by the ADVANCE Program has demonstrated an important relationship between leadership opportunities and faculty satisfaction and retention. ${ }^{15}$ For example, our 2020 exit interview study of tenure-track faculty who voluntarily left U-M found that a lack of leadership pipeline entry points and leadership prospects was cited by many faculty as a contributing factor in their decision to leave the University. Across exit interviews of the tenured faculty, half of the associate and full professors interviewed identified opportunities for leadership as a factor influencing their decision to leave U-M for a new position. Across all ranks, $24 \%$ of interviewees named a lack of leadership opportunities as one of the top factors in their decision to leave U-M.

Our previous work has also illuminated systematic differences in leadership opportunities and experiences as a function of gender and race-ethnicity. In a study of senior faculty in the College of Engineering, many of the women faculty noted critical impediments to their taking on leadership positions, including sexist attitudes about women and a perceived lack of support for carrying out leadership roles. ${ }^{16}$ The AY2015 Annual Indicator report ${ }^{17}$ shared that URM faculty were less likely than non-URM faculty to indicate having a voice in departmental decision-making and having the opportunity to serve on influential departmental committees. Furthermore, the report showed that Asian/Asian American faculty served as department/unit chairs, high-level academic administrators, and executive committee members at lower rates than White faculty between AY2009 and AY2012. Additionally, results from the most recent campus-wide faculty climate survey (2017) indicate that crucial differences in experiences between groups persist. ${ }^{18}$ Women and BIPOC faculty reported significantly lower levels of influence and voice in their department matters compared to men and White faculty, respectively.

These findings raise important questions about inclusion and equity with regard to the pipeline of leadership opportunities at U-M and indicate the importance of continued monitoring of these issues. We begin by analyzing the demographic makeup of faculty in leadership positions across campus, including academic department chairs, high-level administrative positions, and department and school/college-level executive committee memberships. Figure 2a presents the composition of department chairs campus-wide by gender across four points in time: AY2012, AY2015, AY2018, and AY2021. Although the proportion of department chair positions held by men faculty decreased from

[^6]$72 \%$ in AY2012 to $62 \%$ in AY2021, men in this type of role are almost on par relative to the percent composition of these faculty at the university today ( $65 \%$ [Figure 1a]). The proportion of chairs held by women increased from $28 \%$ in AY2012 to $38 \%$ in AY2021, i.e., their representation as department chairs is slightly above the proportion of women faculty at the university today (35\% [Figure 1a]).

Figure 2 b presents the composition of department chairs campus-wide by race-ethnicity across four points in time: AY2012, AY2015, AY2018, and AY2021. The proportion of chairs held by White faculty decreased from 81\% in AY2012 to 74\% in AY2021, indicating that their representation as department chairs is slightly above the proportion of White faculty at the university today ( $72 \%$ [Figure 1a]). In contrast, fluctuation in the percentage of chair positions held by Asian/Asian American faculty, $12 \%$ in AY2012, $9 \%$ in AY2015, and 10\% in AY2018, means that despite the most recent increase to $16 \%$ in AY2021, there remains a slight under-representation of Asian/Asian American faculty in this type of role relative to the percent composition at the university today (19\% [Figure 1a]). Finally, there was growth in the proportion of department chairs held by URM faculty, from 7\% in AY2012 to $10 \%$ in AY2021, i.e., representation of URM faculty in this type of leadership role is slightly above the composition at the university today (9\% [Figure 1a]).

Figure 2a: Composition of Department Chairs by Gender AY2012-2021

Figure 2b: Composition of Department Chairs by Race-Ethnicity AY2012-2021

We conducted a similar comparison for high-level academic administrative positions ${ }^{19,20}$ held by full professors across the University. We examined the composition of these administrative positions by gender and race-ethnicity to assess changes in representation and opportunities for leadership across four points in time: AY2012, AY2015, AY2018, and AY2021. ${ }^{21}$ Figure 3a presents the proportion of highlevel administrative positions by gender. The proportion of high-level administrative positions held by men faculty decreased from $63 \%$ in AY2012 to $55 \%$ in AY2021, indicating their under-representation in this type of leadership role relative to the percent composition of these men full professors at the university today (72\% [Figure 1d]). In tandem, after remaining relatively flat from AY2012 to AY2015 (37$38 \%$ ), the proportion of high-level administrative positions held by women increased to $45 \%$ in AY2021, indicating their over-representation in this type of leadership role relative to the percent composition of women full professors at the university today ( $28 \%$ [Figure 1d]).

As shown in Figure 3b, results for the same analysis by race-ethnicity reflect a more variable pattern. Although the proportion of high-level academic administrator positions held by White faculty decreased from $83 \%$ in AY2012 to $77 \%$ in AY2021, their representation in this type of role remains slightly above the proportion of White full professors at the university today ( $76 \%$ [Figure 1d]). The proportion of highlevel academic administrator positions held by Asian/Asian American faculty has risen at each time point, such that there was a more than tripling in the proportion of Asian/Asian American faculty in these roles from 3\% in AY2012 to 10\% by AY2021. Yet these faculty remain underrepresented in this type of role relative to the percent composition of Asian/Asian American full professors at the university

[^7]today (15\% [Figure 1d]). On the other hand, the proportion of high-level academic administrator positions held by URM faculty has varied from 14\% in AY2012, to 19\% in AY2015, and back down to 14\% in AY2021. Nonetheless, the proportion of URM faculty in this type of role exceeds the percent composition of URM full professors at the university today (9\% [Figure 1d]).

Figure 3a: Composition of High-level Academic Administrators by Gender AY2012-2021

Figure 3b: Composition of High-Level Academic Administrators by Race-Ethnicity AY2012-2021

Faculty participation in school/college- or department-level ${ }^{22}$ executive committees may be considered pipeline opportunities that serve as a prelude to future campus leadership. We examined the

[^8]composition of faculty who served on executive committees at the unit-level by gender and raceethnicity to assess changes in representation and participation in pipeline leadership across four points in time: AY2012, AY2015, AY2018, and AY2021. Figure 4a shows that the proportion of men faculty on executive committees decreased from $70 \%$ in AY2012 to $55 \%$ in AY2021, indicating that they are now underrepresented in this type of leadership role relative to the percent composition of men faculty at the university today ( $65 \%$ [Figure 1a]). The proportion of women faculty on executive committees has steadily increased over this period of time, from $30 \%$ in AY2012 to $45 \%$ in AY2021, indicating that they are now overrepresented in this type of leadership role relative to the proportion of women faculty at the university today ( $35 \%$ [Figure 1a]).

Figure 4a: Composition of College \& Department Executive Committees by Gender AY2012-2021

Figure 4b: Composition of College \& Department Executive Committees by Race-Ethnicity AY20122021

Figure 4b presents a similar assessment of faculty participation in school/college- or department-level executive committees by race-ethnicity and reveals a more complex pattern. First, the proportion of White faculty on executive committees declined slightly from $80 \%$ in AY2012 to $76 \%$ in AY2021, but their representation on executive committees is still slightly above the proportion of White professors at the university today (72\% [Figure 1a]). The proportion of Asian/Asian American faculty on executive committees has fluctuated over the four time points and remains stagnant at $10 \%$ in AY2021, which indicates remarkable under-representation of Asian/Asian American faculty in this type of leadership role relative to percent composition of Asian/Asian American professors at the university today (19\% [Figure 1a]). Fluctuation also characterizes the proportion of URM faculty on executive committees over the four time points. However, with a highpoint of $13 \%$ in AY2021, the representation of URM faculty on executive committees exceeds the relative proportion of URM professors at the university today (10\% [Figure 1a]).

## FACULTY RECOGNITION

Research conducted by the ADVANCE Program has found that valuing faculty members' contributions and recognizing their achievements is important for faculty retention, especially for those at the assistant professor rank. ${ }^{23}$ Recent scholarship on the subject of faculty diversity and excellence argues that formal recognition of faculty accomplishments has both institutional and personal intellectual benefits. ${ }^{24}$ Data from our unit-level climate assessments and exit interview study demonstrate the importance of recognizing and respecting faculty members' contributions. Our exit interview study found that more than one-third of the tenured faculty identified a lack of recognition by colleagues regarding their scholarly contributions as a factor in their decision to leave U-M. Additionally, one-half of the assistant professors we talked to reported the same. ${ }^{25}$ In fact, more than one-quarter of pre-tenure faculty identified a lack of recognition as the most important factor they considered when making their decision to leave and were more likely to report this than tenured faculty.

Given that recognition is a key contributing factor to the institutional commitment of faculty, we examine two means of formal recognition available to faculty at U-M, named professorships and diversity awards. In this analysis, we look across four award categories that honor faculty scholarship, research, teaching, and creative practice: Distinguished University Professorship, ${ }^{26}$ Collegiate Professorship, ${ }^{27}$ Endowed Collegiate Professorship, and Thurnau Professorship. ${ }^{28}$ Since these appointments are generally limited to full professors, we include only faculty at this rank for this analysis across four points in time: AY2012, AY2015, AY2018, and AY2021. 29

Figure 5a presents the proportion of named professorships by gender. The proportion of men faculty who held named professorships decreased from 79\% in AY2012 to 71\% in AY2021, which is similar to the percent composition of these men full professors at the university today (72\% [Figure 1d]). In complementary fashion, the proportion of women faculty who held named professorships consistently increased during this same period from $21 \%$ in AY2012 to $29 \%$ in AY2021, indicating that the representation of women faculty receiving formal recognition through named professorships just above the proportion of women full professors at the university today (28\% [Figure 1d]).

Figure 5b presents a similar analysis of composition of faculty awards by race-ethnicity. Results show that the proportion of White faculty who held named professorships decreased from 83\% in AY2012 to

[^9]76\% in AY2021, which is equal to the percent composition of White full professors at the university today ( $76 \%$ [Figure 1d]). The proportion of Asian/Asian American faculty who held named professorships steadily increased from 10\% in AY2012 to 16\% in AY2021, just above the percent composition of Asian/Asian American full professors at the university today (15\% [Figure 1d]). During this same time period, the proportion of URM faculty awarded named professorships fluctuated from 7\% in AY2012 to $9 \%$ in AY2015, and then fell to $8 \%$, which is just below the percent composition of URM full professors at the university today ( $9 \%$ [Figure 1d]).

Figure 5a: Composition of Named Professorships by Gender AY2012-2021

Figure 5b: Composition of Named Professorships by Race-Ethnicity AY2012-21

A second analysis of formal recognition available to faculty at U-M looks across the body of diversity awards ${ }^{30}$ that honors faculty contributions and demonstrated commitments to diversity and equal opportunity in higher education through research/scholarship, teaching and mentoring, creative practice, and/or service activities. These appointments are generally limited to full professors and currently are tracked by the ADVANCE Program, since the institutional data does not capture any record of the Diversity Awards. Thus, the data is available for three time periods and the most current year only: 2005-2009, 2010-2014, 2015-2018, and 2021. Figure 6a presents the proportion of diversity awards by gender. There is a steep decline in the proportion of men faculty who receive a diversity award, from $51 \%$ in 2005-2009 to $22 \%$ in 2021, which indicates an under-representation in receipt of this kind of formal recognition relative to percent composition of men full professors at the university today ( $72 \%$ [Figure 1d]). A corresponding increase in the proportion of women faculty who receive a diversity award, from $49 \%$ in 2005-2009 to $78 \%$ in 2021, which indicates a remarkable overrepresentation in receipt of this kind of formal recognition relative to percent composition of women full professors at the university today ( $28 \%$ [Figure 1d]).

Figure 6b presents a similar analysis of composition of Diversity Awards to faculty by race-ethnicity. Results show that the proportion of White faculty who received a diversity award fluctuated over time, with a low of $33 \%$ in 2015-2018 and a high of $53 \%$ in 2021, which still indicates under-representation in receipt of this kind of formal recognition relative to percent composition of White full professors at the university today ( $76 \%$ [Figure 1d]). A striking result is the disparity in the proportion of Asian/Asian American faculty who received a diversity award during this period (2-5\%), not only relative to percent composition of Asian/Asian American full professors at the university today (15\% [Figure 1d]) but also compared to the other faculty groups. In stark contrast, the proportion of URM faculty who received a diversity award at any given point during this period, ranging from $43 \%$ to $63 \%$, shows a vast overrepresentation in receipt of this kind of formal recognition relative to percent composition of URM full professors at the university today ( $9 \%$ [Figure 1d]).

[^10]Figure 6a: Composition of Diversity Award Recipients by Gender AY2012-2021

Figure 6b: Composition of Diversity Award Recipients by Race-Ethnicity AY2012-2021

## CONCLUSIONS

This report profiles the composition of tenure-track faculty at U-M over time and examines issues related to opportunities for leadership and receipt of formal recognition, as well as the extent to which these results differ by gender and race-ethnicity. In terms of faculty composition, we find that the higher the rank, the less diverse the faculty in terms of gender and race-ethnicity. The results show growth in the diversity of assistant professors who reflect a pronounced change in the representation of women and BIPOC faculty among newly hired tenure track-faculty over time. However, on the whole, stagnation characterizes the percentages of URM faculty over the last twenty years, especially for tenured faculty. Additionally, although the percent composition of Asian/Asian American faculty shows a steady trend of continued increase, the growth is uneven across gender and the gain in percent of Asian/Asian American women faculty lags that for men, especially in the rank of full professor. A focus on full professors is crucial as they compose the pool of candidates for administrative leaders who shape campus discourses and policies. The points of stagnation and uneven progress along the faculty diversity pipeline direct us to address the institutional factors that hinder progress in the representation of BIPOC faculty in the academy and shape their progression/retention through the tenure ranks.

It is worth highlighting that the total number of faculty has increased, so nuanced change in numerical size of faculty groups is not conveyed in the long view on percent composition. An exploration of faculty population change as ratios of sub-groups is helpful for reflecting on the current composition of the tenure-track faculty. In sum, despite a noticeable decrease in percentage composition over time of White men faculty, they remain an overwhelming majority of the faculty population, outnumbering White women almost 2 to 1, Asian/Asian American men about 4 to 1, Asian/Asian American women by more than 8 to 1, URM men by more than 8 to 1, and URM women by more than 10 to 1 . Overall, the UM remains a predominantly white institution and a minor gain or loss of faculty among relatively sparse faculty sub-groups (e.g., Asian/Asian American women and URM men and URM women) can mean a major change in progress toward equitable representation and gains toward critical mass. ${ }^{31}$ It is the relative scale of these tenure-track faculty sub-groups that lend context to these data and serve as a backdrop for the results presented in the report sections on leadership and recognition.

There is a vital relationship between leadership opportunities and faculty satisfaction and retention, as mentioned above. We sought to assess inclusion and equity of faculty in leadership by examining pipeline opportunities in the form of roles as executive committee member, department chair, and academic administrator. Women faculty are overrepresented compared to men faculty in roles as an executive committee member, which mirrors a longstanding pattern of gender inequity in academic service such that women generally perform more service work than men. Otherwise women faculty are represented on par in leadership positions along the pipeline. White faculty are well-represented throughout the leadership pipeline, regardless of role. Likewise, URM faculty have representation that exceeds percent composition across the leadership roles. However, a standout pattern for these results concerns Asian/Asian American faculty who are underrepresented in leadership pipeline roles relative to

[^11]percent composition at each stage of the pipeline, with the largest gap for executive committee roles, followed by academic administrator roles and department chair roles. These results suggest a leadership pipeline experience that is a shoofly for some and a side bend or bottle neck for others. Given that engagement in and prospects for leadership has been cited as a contributing factor in the decision to leave the University, the U-M will want to take note of and address these disparities lest we face a trend in loss of our valued faculty.

Recognition is also important to faculty job satisfaction and lack of recognition can have negative implications for retention. We maintain that representation and recognition are interconnected and may be considered an expression of institutional values, since the recipients of faculty recognition awards draw attention to the immense talents within the university community. For these reasons, we examined the distribution of awards to assess patterns and trends in the faculty accomplishments and contributions that are recognized. The awarding of named professorships is shown to be inclusive and equitable by gender and race-ethnicity relative to percent composition at this point in time. In contrast, the results for diversity awards suggest challenges for equity and inclusion. Women were overrepresented in their receipt of diversity awards compared to men. There was also a notable uptick in awards to White faculty, suggesting a growth regarding engagement in scholarship, teaching, research, and creative practice in the interest of diversity. In contrast, Asian/Asian American faculty received far fewer diversity awards relative to White and URM faculty. This raises questions about whether faculty excellence in diversity awards may reflect systemic biases, including those based on academic discipline, curriculum and pedagogy, and assessment, suggesting that the institutional lens on scholarly contributions to diversity that are eligible for and deemed worthy of recognition aligns with prevailing stereotypes about affinity between social identities and topic selection. It may be that despite significant gains, Asian/Asian American tenure-track faculty remain heavily underrepresented in multiple aspects of the university, including non-STEM academic programs that are typically considered as areas of scholarship that reflect diversity contributions, and as such are overlooked.

Results included in this report suggest many directions for our continued research. Our work to monitor and explore persistent gaps in faculty retention remains a priority. We will want to assess whether the promising growth in diversity of representation early in the tenure pipeline, such as at the assistant level, will be a strong indicator of faculty diversity at the associate level, as well as promotion to full professor. At the same time, we will want to avoid an overreliance on representation as a gauge for adequacy and/or progress toward strategic institutional goals, since there can still be a paradoxical lack of institutional power, as we see for BIPOC faculty. The distribution of faculty who hold leadership roles and receive recognition draws attention to our need to more carefully probe the unfolding of who is and is not being tapped or recognized in our current leadership and recognition awards system over the faculty lifecycle. This raises questions as to the "how," "who" and "why" of leadership and recognition, "what" type of leadership and contributions are recognized, and "where" leadership and recognition are located in terms of faculty rank and academic discipline. Pursuing these questions will provide much needed evidence about our values and culture as an institution, provide grounding for continued transformation for the better, and promises to have a positive impact on faculty retention and success.

## 2021 Indicator Report: Index of Appendices

Institutional Indicators Required by NSF ADVANCE ..... A-2

## Appendix A

 Institutional Indicators Required by NSF ADVANCE1. $\mathrm{n}(\%)$ of women faculty in S \& E by department
2. $n(\%)$ of women in tenure-line positions by rank/department
3. tenure promotion outcomes by gender
4. years in rank by gender
5. time at institution and attrition by gender
6. $\mathrm{n}(\%)$ of women in S \& E who are in non tenure-track positions
7. $n(\%)$ of women S \& E in administrative positions
8. $n$ of women S \& E faculty in endowed/named chairs
9. $n(\%)$ of women S \& E faculty on promotion and tenure committees
10. salary of $\mathrm{S} \& \mathrm{E}$ faculty by gender (with controls)
11. space allocation of $S \& E$ faculty by gender (with controls )
12. start-up packages of newly hired S \& E faculty by gender (with controls)

[^0]:    ${ }^{1}$ https://advance.umich.edu/research/
    ${ }^{2}$ AY: an academic year equates to one academic calendar year that includes each of a Fall Term, Winter Term, and Spring/Summer Term (i.e., September-August).
    ${ }^{3}$ The National Science Foundation (NSF) undertook the ADVANCE Institutional Transformation Program in 2001 as a way to cultivate the success of women in academic science and engineering who "continue to be significantly underrepresented in some science and engineering fields and proportionately under-advanced in science and engineering in the Nation's colleges and universities." The University of Michigan ADVANCE Program was in the first cohort of institutions funded under this initiative. When that grant ended in 2007 the University continued to fully fund the ADVANCE Program and expanded it to address necessary institutional changes to support the needs of a diverse faculty in all fields.
    ${ }^{4}$ There were 12 indicators identified by NSF; see Appendix A.
    ${ }^{5}$ The ADVANCE Program is grateful to the data liaisons in each of the academic units for their invaluable assistance over time with the data collection and verification process.
    ${ }^{6}$ Counts of research faculty and clinical faculty are available on https://advance.umich.edu/dashboards/ .

[^1]:    ${ }^{7}$ The processing for extracting, cleaning, and counting faculty data changed with AI 2021. Additional data elements from the data warehouse were added, and our data processing migrated to SPSS. Departments are included in groups to align with their reporting groups within the schools and colleges.

[^2]:    ${ }^{8}$ Six demographic sub-groups by gender and race-ethnicity: White men, White women, Asian/Asian American men, Asian/Asian American women, Underrepresented Minority men, and Underrepresented Minority women.
    ${ }^{9}$ URM includes individuals who self-identify as African-American/Black, Native American/Alaskan Native, Latinx/Hispanic, and Native Hawaiian/Pacific Islander. For individuals who self-identify with two or more races, where further detail is available, URM also includes those individuals who self-identify with at least one of the categories considered URM.

[^3]:    ${ }^{10}$ BIPOC refers to all faculty of color, including African-American/Black, Native American/Alaskan Native, Latinx/Hispanic, Hawaiian Native/Pacific Islander, Asian/Asian American, and Multi-race faculty.

[^4]:    ${ }^{11}$ Changes in U-M headcount and percentages of tenure-track faculty can be explored in detail online with the ADVANCE Program interactive dashboard.
    ${ }^{12}$ Headcounts come from data that represents portions of the U-M Human Resource Data Warehouse according to Appointing Department Group filters, in combination with other data elements as needed, for an unduplicated count of individuals.

[^5]:    ${ }^{13}$ The AY2014 Annual Indicator Report provides a more comprehensive analysis of changes in faculty composition during the pre- and post-ADVANCE period.
    ${ }^{14}$ Black, Indigenous and People Of Color (BIPOC) Faculty Retention at the University of Michigan: Interviews with Michigan Faculty, University of Michigan ADVANCE Program 2021.

[^6]:    ${ }^{15}$ Exit Interview Study of Tenured/Tenure-Track Faculty: Exploring Factors Related to Job Satisfaction and Departure,
    University of Michigan ADVANCE Program 2020.
    ${ }^{16}$ College of Engineering Dean's Advisory Committee on Female Faculty: Report of Interviews with Senior Female Faculty, University of Michigan ADVANCE Program 2014.
    ${ }^{17}$ University of Michigan Tenure Track Faculty AY2015 Indicator Report, University of Michigan ADVANCE Program 2015.
    ${ }^{18}$ Assessing the Academic Work Environment for Tenured/Tenure-track Faculty at the University of Michigan in 2012 and 2017: Gender, Race, \& Discipline in Department- and University-related Climate, University of Michigan ADVANCE Program 2018.

[^7]:    ${ }^{19}$ High-level academic administrative positions include role such as president, provost, executive vice president, associate vice president, vice provost/interim vice provost, senior vice provost of academic affairs, dean/interim dean, senior associate dean, associate dean, executive vice dean, assistant dean, medical officers, clinical officers, and university librarian.
    ${ }^{20}$ Data for AY2021 administrative positions come from portions of the U-M Human Resource Data Warehouse as of February, 2022.
    ${ }^{21}$ Due to missing institutional data for gender and race-ethnicity, the size of the subpopulation of reference (total
    n) may vary from group to group within a given year for the same measure of faculty leadership.

[^8]:    ${ }^{22}$ Data for faculty service on executive committees is provided by those schools/colleges or departments that have executive committees as part of their governance and thus is not representative of the entirety of U-M academic units.

[^9]:    ${ }^{23}$ Exit Interview Study of Tenured/Tenure-Track Faculty: Exploring Factors Related to Job Satisfaction and Departure, University of Michigan ADVANCE Program 2020.
    ${ }^{24}$ Stewart. A.J., \& Valian, V. (2018). An inclusive academy: Achieving diversity and excellence. Cambridge: MIT Press.
    ${ }^{25}$ Why Do Tenure Track Faculty Leave U-M?, University of Michigan ADVANCE Program 2020.
    ${ }^{26}$ Distinguished University Professorships recognize exceptional scholarly achievement, national and international reputation, and superior teaching skills.
    ${ }^{27}$ Collegiate Professorships and Endowed Collegiate Professorships recognize outstanding scholarship, teaching, and service.
    ${ }^{28}$ Thurnau Professorships recognize and reward faculty for outstanding contributions to undergraduate education.
    ${ }^{29}$ Due to missing institutional data for gender and race-ethnicity, the size of the subpopulation of reference (total
    n) may vary from group to group within a given year for the same measure of faculty recognition.

[^10]:    ${ }^{30}$ The faculty Diversity Awards include formal recognition across a number of named professorships, including the James S. Jackson Distinguished Career Award for Diversity Scholarship, Ida Gray Award, Carol Hollenshead Award, Harold R. Johnson Diversity Service Award, James T. Neubacher Award, Sarah Goddard Power Award, Shirley Verrett Award, Circle Award, and Cornerstone Award.

[^11]:    ${ }^{31}$ Critical mass is not a fixed percentage or number, rather a concept that emphasizes the importance of ensuring adequate representation of minoritized populations to mitigate the marginalization of these group members. Additionally, it may be defined as the point at which those in underrepresented minority groups no longer feel isolated or like spokespeople for their race(s).
